TECHNICAL SKILLS

Automation & QA

Selenium · Appium · Cucumber · TestNG · JUnit · Rest-Assured · Page Object Model · Hybrid Framework

AI & Machine Learning

LLMs · RAG · MCP · LangChain · OpenAI API · Hugging Face · Prompt Engineering

DevOps & CI/CD

GitHub Actions · Jenkins · Docker · Maven · Git · Bitbucket

Languages

Java (Expert) · Python (Proficient) · TypeScript

EDUCATION

B.Tech — Information Technology

SRM Institute of Science & Technology

2006 – 2010 · 82%

PROFESSIONAL SUMMARY

Senior SDET with 14+ years of experience building automation frameworks across Mobile, API, and Web platforms. At PayPay Japan, I work within the AutoQA team — designing tooling, improving CI/CD pipelines, and helping product teams ship with confidence. Over the past couple of years, I've been deliberately moving toward AI-driven QA — experimenting with LLMs and LangChain to make test automation smarter, from automated test generation to early foundations of self-healing frameworks.

EXPERIENCE

Software Development Engineer in Test (SDET)

Sep 2021 – Present

PayPay Corporation · Tokyo, Japan

- Part of the AutoQA team — building and maintaining automation tooling that helps reduce manual QA work across product teams.
- Work across Mobile (Appium), API, and Web (Selenium) automation frameworks, keeping them stable and up to date.
- Improved CI/CD pipelines using GitHub Actions — faster runs, better reliability, and parallel test execution.
- Experimenting with LLM-based tools for test case generation and early steps toward self-healing test frameworks.
- Work closely with global and Japanese teams to coordinate releases and maintain test coverage.

Senior Software Development Engineer in Test

Oct 2019 – Aug 2021

Qualitest Group · Bengaluru, India

- Built and maintained a Hybrid Automation Framework (Java, Selenium, Rest-Assured) covering UI and REST API testing for SiriusXM, a large US media client.
- Set up and managed Jenkins CI pipelines for regression cycles — reduced manual effort by around 60%.
- Was the main QA contact for the client, handling daily standups and regular status calls with senior stakeholders across time zones.

Test Lead

Mar 2018 – Oct 2019

HCL Technologies · Bengaluru, India

- Built test automation for SOAP webservices and UI flows for a mortgage origination platform used by ING Bank, Australia.
- Ran Agile/Scrum ceremonies and helped junior engineers get comfortable with the automation framework.

Senior Software Engineer (SDET)

Dec 2013 – Feb 2018

Larsen & Toubro Infotech (LTI) · Chennai, India

- Worked onsite in Tokyo for ~19 months — gathered requirements directly from Japanese client teams at Hitachi.
- Automated storage monitoring UIs and REST APIs for Hitachi; led a module team of 6 engineers.
- Built a REST API automation framework using Java, Rest-Assured, and Groovy with TestNG reporting.

Software Engineer

Sep 2011 – Nov 2013

Xerago · Chennai, India

- Built UI components for an insurance portal (Royal Sundaram) using JSP, JavaScript, and jQuery.
- Worked on REST APIs and database layer; handled bug fixes and feature delivery as part of a small dev team.
